

# Evli Europe B

Equity fund that invests in European companies.

## MANAGER'S COMMENT

Stocks fell in February as war in Ukraine and sanctions imposed on Russia prompted investors to push for continued negative market momentum after an already soft start to the new year. Evli Europe does not invest in Russian stocks, and the Fund's portfolio does not include companies with significant revenue exposure to Russia. The Fund's return was -3.93% in February, while the return of the benchmark index was -3.01%.

By sector, stock selection had a negative net effect on the return differential. The most harmful selection effects came from industrials and the most beneficial ones from health care. Sector weights had an almost neutral impact, as the gain from an underweight in financials was canceled out by the aggregate effect of other sector weights. Geographically, country weights – such as overweights in Sweden and Austria– weakened the relative return, although an underweight in Germany benefitted the Fund to some extent. Currency weights, mainly an overweight in SEK and an underweight in CHF, also harmed the Fund somewhat. The net effect of stock selection was slightly positive. Selection in France and the Netherlands helped the most, while selection in the UK had the most detrimental effect. By stock, the bottom attributors were Trelleborg, Andritz, and IMI, while the top attributors were Ipsen, Bunzl, and Randstad.

## BASIC INFORMATION

Fund Manager	Hans-Kristian Sjöholm
Benchmark	MSCI Daily Europe TR NET Index (EUR)
ISIN	FI0008802046
Fund Starting Date	30.8.2000
Current Strategy Starting Date	31.3.2010
Morningstar Fund Category™	Europe Flex-Cap Equity
Morningstar Rating™	★★★★☆
SFDR classification	Article 8
Responsibility score	AAA

## RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility score	AAA
Environment	BBB
Social	BBB
Governance	A
Coverage of the analysis (%)	97

ESG means factors related to Environmental, Social and Governance issues.

**ESG rating:** companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.

**Fund's Responsibility score:** based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings, the ratings' trend, and the weight of companies with B and CCC ratings.

## CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

Carbon footprint	136 (t CO2e/\$M Sales)

## DICTIONARY

**Active Share, %** measures how much fund portfolio (based on position weights) differs from the benchmark index. If active fund has same shares with same position weights as in benchmark, then its' active share is 0%. If active share % is high, fund portfolio differs largely from the benchmark.

**Alpha** describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns attained by the fund in relation to its market risk.

**Beta** describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

**Carbon footprint** Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). The funds holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

**Information Ratio** describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

**Portfolio Turnover Rate** is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate =  $((X + Y) - (S + T)) / M \times 100 / 2$ , where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

**R-Square** describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-square is the square of the correlation coefficient.

**SFDR-classification** In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investments decisions (article 6 funds).

**Sharpe Ratio** indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

**TER (Total Expense Ratio)** is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded.  $TER = A + B + C + D$ , where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

**Tracking Error** indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three  $\pm 5\%$  of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

**Volatility** is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is  $12 \pm 20\%$ , that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.
